Monomer Research

datapilot-ai v0.8

tell me why not this dataset is perfect for the ml.

Insight:

The dataset has 400 rows and 19 columns, with no missing values and no duplicates. The mean age of the students is 23.0, and the mean university GPA is 3.441.

Risk:

The dataset may not be perfect for ML due to potential biases in the data. For example, the mean SAT score is 1388.6, which is relatively high, indicating that the dataset may be biased towards students from higher socio-economic backgrounds.

Action:

To improve the dataset, consider collecting more data from diverse sources to reduce potential biases. Additionally, explore feature engineering techniques to create new features that can help improve model performance. Consider applying statistical tests, such as correlation analysis, to identify relationships between variables.

What trends exist in this dataset?

Insight:

1. The mean number of internships completed is 2.5, and the mean number of projects completed is 6.235, indicating that students have more project experience than internship experience.

2. The mean soft skills score (7.333) is higher than the mean networking score (6.933), suggesting that students may have stronger soft skills than networking skills.

3. The mean starting salary is not provided, but the sample data shows a range of starting salaries from 40,000 to 120,000, indicating a potential relationship between university GPA, internships, and starting salary.

Risk:

The dataset may not capture the full range of experiences and outcomes for all students, potentially leading to biased trends.

Action:

Apply correlation analysis and visualization techniques (e.g., scatter plots, heatmaps) to explore relationships between variables, such as university GPA, internships, and starting salary, to identify more trends and patterns in the data.

Ask anything about your data... (e.g. 'Why is revenue dropping?')

Clear Chat History

> Dataset Context Summary

The screenshot displays the DataPilot AI web application interface. The top navigation bar includes links for 'DataPilot AI — AI Data Intelligence', 'Streamlit Duplicate Element ID', and 'Untitled document - Google Do'. The browser address bar shows 'datapilot-ai.streamlit.app'. The main interface features a sidebar on the left with 'Upload Dataset' and 'Chart Theme' (set to 'plotly_w...'). The central area shows a dataset 'edu' with 27.7 rows. A 'Statistical Intelligence Engine' section is active, displaying a 'Test Recommender' button. Below this, the results of a Mann-Whitney U Test are shown: Test Statistic is 24983.0, P-Value is 0.0000, and it is Significant (Yes). An 'Assumptions Check' section indicates 'normality_ok: false' and 'n_groups: 2'. A recommendation states: 'Consider using this grouping as a feature in your ML model.'

1. The mean number of internships completed is 2.5, and the mean number of projects completed is 6.235, indicating that students have more project experience than internship experience.
 2. The mean soft skills score (7.933) is higher than the mean networking score (6.933), suggesting that students may have stronger soft skills than networking skills.
 3. The mean starting salary is not provided, but the sample data shows a range of starting salaries from 40,000 to 120,000, indicating a potential relationship between university GPA, internships, and starting salary.
- ⚠️ **Risk:** The dataset may not capture the full range of experiences and outcomes for all students, potentially leading to biased trends.
- ✅ **Action:** Apply correlation analysis and visualization techniques (e.g., scatter plots, heatmaps) to explore relationships between variables, such as university GPA, internships, and starting salary, to identify more trends and patterns in the data.

🔧 Prepare ML-ready feature suggestions

- 📊 **Insight:**
1. The dataset contains a mix of numeric and categorical features, with 14 numeric columns and 5 categorical columns.
 2. The numeric columns have varying means and standard deviations, such as "Age" (mean: 23.0, std: 1.416) and "University_GPA" (mean: 3.441, std: 0.286).
 3. The categorical columns, such as "Field_of_Study" and "Current_Job_Level", can be encoded using techniques like one-hot encoding or label encoding.
- ⚠️ **Risk:** The dataset may require handling of categorical variables and potential scaling/normalization of numeric variables to ensure ML model performance.
- ✅ **Action:**
- Create new features, such as
 - "GPA_Ratio" (University_GPA / High_School_GPA)
 - "Experience_Score" (Internships_Completed + Projects_Completed)
 - Encode categorical variables using one-hot encoding or label encoding
 - Scale/normalize numeric variables using techniques like Standard Scaler or Min-Max Scaler
 - Consider feature selection techniques to reduce dimensionality and improve model performance

Assess ML Readiness

55/100

ML Readiness Score

REGRESSION

✔ No duplicate rows

⚠ 15.6% missing values — significant imputation needed

⚠ High-cardinality categoricals: ['join_date', 'last_login'] — use target/hash encoding

⚠ 7 categorical column(s) need encoding: ['name', 'gender', 'join_date', 'last_login', 'department']

⚠ Columns with large scale variance (suggest normalization): ['salary_expectation']

✖ Very small dataset (97 rows) — results may be unreliable

🔧 Feature Engineering Suggestions:

> [High] DateTime Parsing — join_date

> [High] DateTime Parsing — last_login

> [Medium] One-Hot Encoding — name

> [Medium] One-Hot Encoding — gender

The screenshot displays the DataPilot AI web application interface, which is designed for machine learning model training directly in a browser.

Left Sidebar:

- Upload Dataset:** A section for uploading datasets, showing a file named "dat" with a size of 8.7K and a plus icon for additional uploads.
- File:** Displays the current dataset as "97 x 13".
- Trust:** Shows a trust score of 76%.
- Missing:** Indicates 197 missing values.
- Numeric:** Shows 5 numeric features.
- Chart Theme:** A dropdown menu currently set to "plotly_w...".
- Force App Refresh:** A button to refresh the application state.
- Made with Hugging Face by Wanwan Sarobin DataPilot AI v2.0**: Attribution text at the bottom of the sidebar.

Main Content Area:

- DataPilot AI Header:** Features the logo and the tagline "The AI Data Intelligence Copilot — Understand · Clean · Model · Decide".
- Status Bar:** Displays "Dataset Trust Score: 76% — Needs Cleaning | datapilot_dataset.csv | 97 x 13".
- Tabs:** Navigation tabs include Overview, Visualize, AI Copilot, Statistics, Clean, **ML Studio** (active), and Export.
- ML Studio Section:**
 - Buttons:** Readiness Advisor, **Train Model** (highlighted), and Clustering.
 - Instruction:** "Train an ML model directly in your browser."
 - Target Column:** A dropdown menu set to "id".
 - Detected Problem Type:** A message stating "Regression (97 unique values)".
 - Algorithm:** A dropdown menu set to "Random Forest".
 - Test Set Size:** A slider control set to 0.20.
 - Action Button:** A large green button labeled "Train Model" with a play icon.

Streamlit

⚠️ High Cardinality Categoricals: ['join_date', 'last_login'] — use large/nested encoding

⚠️ 7 categorical column(s) need encoding: ['name', 'gender', 'join_date', 'last_login', 'department']

⚠️ Columns with large scale variance (suggest normalization): ['salary_expectation']

✖ Very small dataset (97 rows) — results may be unreliable

🔥 Feature Engineering Suggestions:

> [High] DateTime Parsing — join_date

> [High] DateTime Parsing — last_login

> [Medium] One Hot Encoding — name

> [Medium] One Hot Encoding — gender

> [Medium] Frequency Encoding — join_date

> [Medium] Frequency Encoding — last_login

🔥 Recommended Algorithms: Linear Regression, Random Forest, XGBoost

- Metric: R² / RMSE
- Expected R2 Range: 0.60 - 0.85
